Program Funding

West Nile Virus Management Program

Since 2003, Bloomfield Township has received a reimbursement for our West Nile Virus Management Program from the Oakland County Health Department. Each year a resolution is required to be approved by the Bloomfield Township Board of Trustees to receive reimbursement for a portion of the funds used to procure the tablets for distribution for the West Nile Virus Management Program. The Bloomfield Township Engineering and Environmental Services Department in partnership with the Department of Public Works uses this reimbursement to treat catch basins, retention ponds, detention ponds and other areas with standing, stagnant water. The county provided a reimbursement of $6,260.56 for the 2019 program which covered the majority of the total cost of the program. In total, Bloomfield Township has received over $150,000 in reimbursements from Oakland County since 2003.

Photos from left to right: The first picture shows the product used to treat standing water. This naturally derived tablet lasts 180 days and kills mosquito larvae. The second photos show Twp. staff administering mosquito protection tablets.
